

Venting Comparison

M-Industries vented liners feature our own unique patented membrane, specially deigned and intelligently manufactured to allow for maximum airflow while holding back liquids.

As the charts below demonstrate, our M-Vent and B-Vent are both available in all pore sizes; however, the M-Vent has 120% more airflow than the B-Vent while holding back even the most aggressive contents. Also note the inverse relationship between air flow and water entry pressure: as air flow increases, WEP decreases and vice versa.

B-Vent

M-Vent
120% More Air Flow
